-------------------------------	---	-------------------------------	--

WHAT TO EXPECT:

Multiple professionals join together to present on remedial approach and design with a focus on increasing success in contaminant destruction and site remediation.

When, Where, and How would you use combined remedies on your site?

Presentations will be given by nationally recognized remediation experts from ISOTEC, AST Environmental, GEO Remediation Company, and XDD Environmental. This updated course offers regulators, consultants, and field applicators a succinct understanding of the primary in-situ remediation technologies, strengths and limitations of each technology, technology selection, and combining technologies in the remediation approach.

The importance of investigation and conceptual site model development will also be discussed to support remedial decision making and planning. Case studies will be presented to showcase examples and lessons learned.
