

**Julien Cohen-Waeber PhD, PE, PG, CEG** is a Managing Engineer with Exponent. He has over 10 years of experience in geotechnical engineering and engineering geology, in North and Central America, Southeast Asia and Europe. Julien specializes in the assessment and mitigation of geologic hazards, construction support and characterization of weak and chaotic rock masses. He also has extensive experience with the evaluation and design of dams, roadways, landfills, commercial development, pipelines, and natural and manmade slopes. Julien's doctoral research focused on the use of remote sensing technologies to track ground surface displacements related to landslide hazard, which he continues as an Affiliate of the Lawrence Berkeley National Laboratory. Julien actively participates in various professional organizations, he is the current United States representative at IAEG and the past chair for the Association of Environmental and Engineering Geologists' San Francisco Bay Area chapter.
